

The Windows Data Management Client For SAM-FS Systems

Archive Data from Windows Systems into SAM-FS - Backup Servers, Remote Offices & Laptops - Instantly Restore Windows Name Space and Access

The Windows Data Management Client (WDMC) Extends the Archiving Functionality of SAM-FS to Windows Clients. Its patented technology provides High Speed Restore for Remote Systems even over a slow link.

Easily Archive Your Windows Data

Archiving Windows Data is as easy as 1, 2, 3 for SAM-FS Owners.

1. Install the Windows Client on your Windows Servers.
2. Identify Data that needs to be protected & set a backup schedule
3. Determine "Release" Policies. Data can be released by directory, age, size, type or any combination. Data can be released on a schedule or when only when the disk fills up.

The system will copy data into SAM-FS, and release the data portion according to the policies you specify. A "Stub" that looks like the file will be left online.

When users access the file it will be recalled seamlessly from SAM-FS without any user intervention.

Go to <http://www.sam-fs.com> for more information on the WDMC.

Backup Laptops, Remote Offices & Servers With HIGH SPEED RESTORE

Reduce IT Overhead with Self-Service Backup and Restore. The WDMC is Ideal for Protecting Laptops, Remote Offices and Local File Servers.

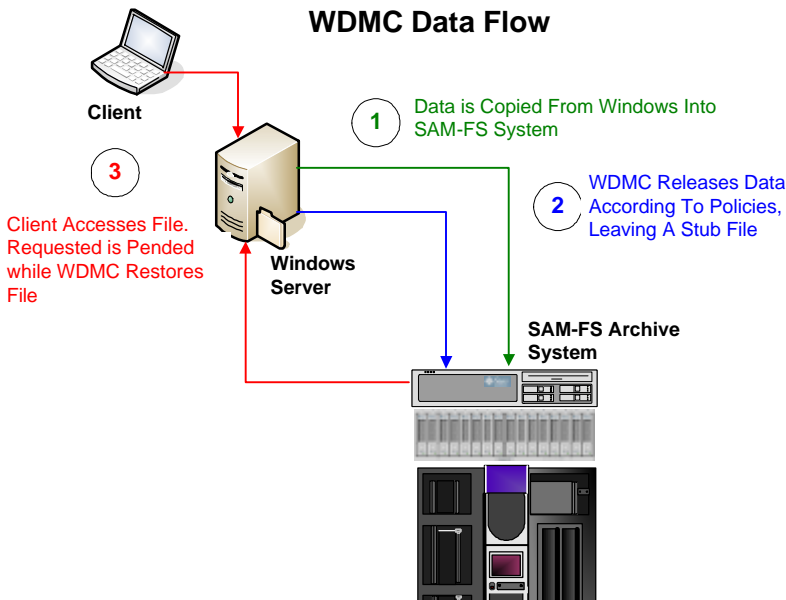

- Client can be Administered by Local Users or Central Administrators allowing Self Service Restore Capabilities
- Data is Compressed and Encrypted. Client can send data over the Internet without the need for a VPN Connection.
- High Speed, Multi-Threaded Backup.
- Patented Restore Capabilities Allows Namespace to be rapidly restored even over slow connections. Data restored in the background and On-Demand.
- Store Multiple Versions. Limit by date range or version count.

Centrally Manage Backup Policies & Jobs

Manage multiple servers or laptops, and monitor job status and operations from a Central Console. The Central Administrator Provides the following features:

- **Policy Control:** Centrally manage which directories are backed up, encryption, retention and alerting settings.
- **Automated Reporting:** E-mail status reports, overdue backup alerts, and error reports.
- **Charge-Backs / Accounting:** Monitor system usage and optionally generate charge-back reports according to policies.

WDMC Data Flow

PASIG Attendees can receive a **FREE COPY** of the Windows Data Management Client. Contact EDSI for Details.
